SAP TechEd

JW263 – AI-assisted optimization of SAP front-end application performance

Joaquin Recio Huertas, SAP

October 2026

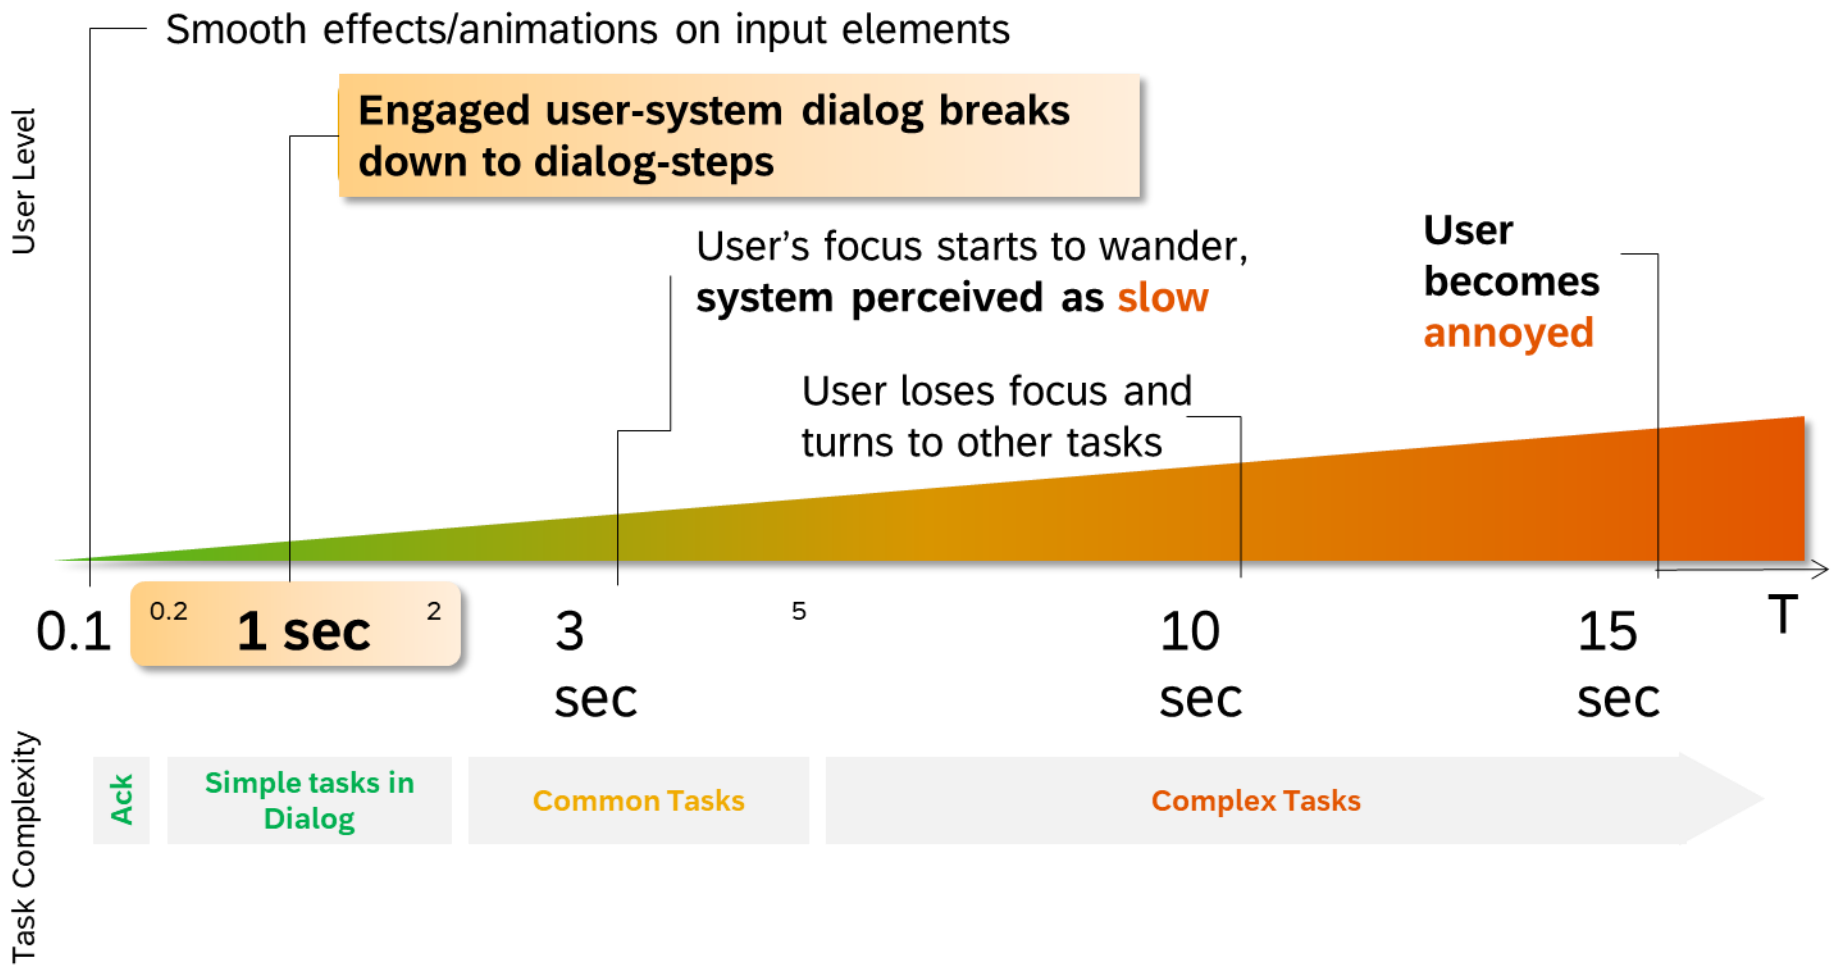

SAP TechEd

Front-end application

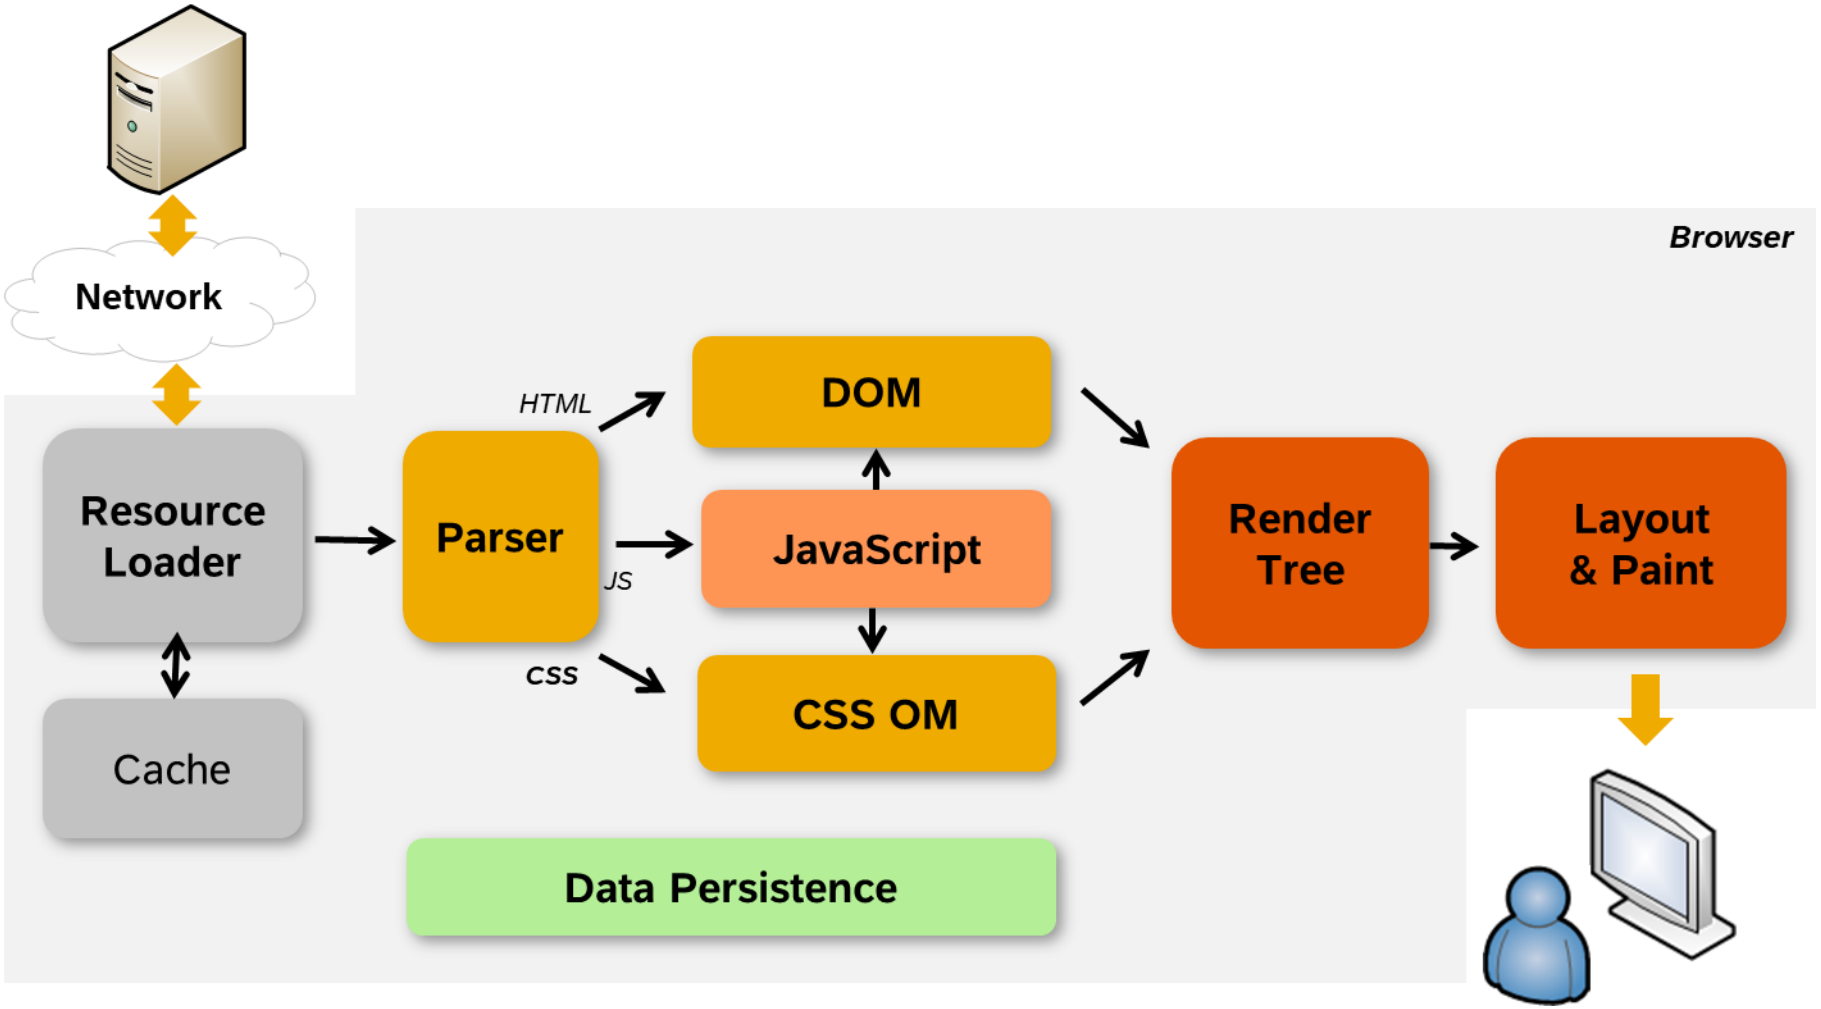

- Responsive across browsers and devices
- Translation and internationalization support
- Extensibility concepts at code and application level
- Standards like MVC, OData, JSON, XML and others
- Predefine theme, custom theme or High Contrast theme to aid visually impaired users
- And much more...

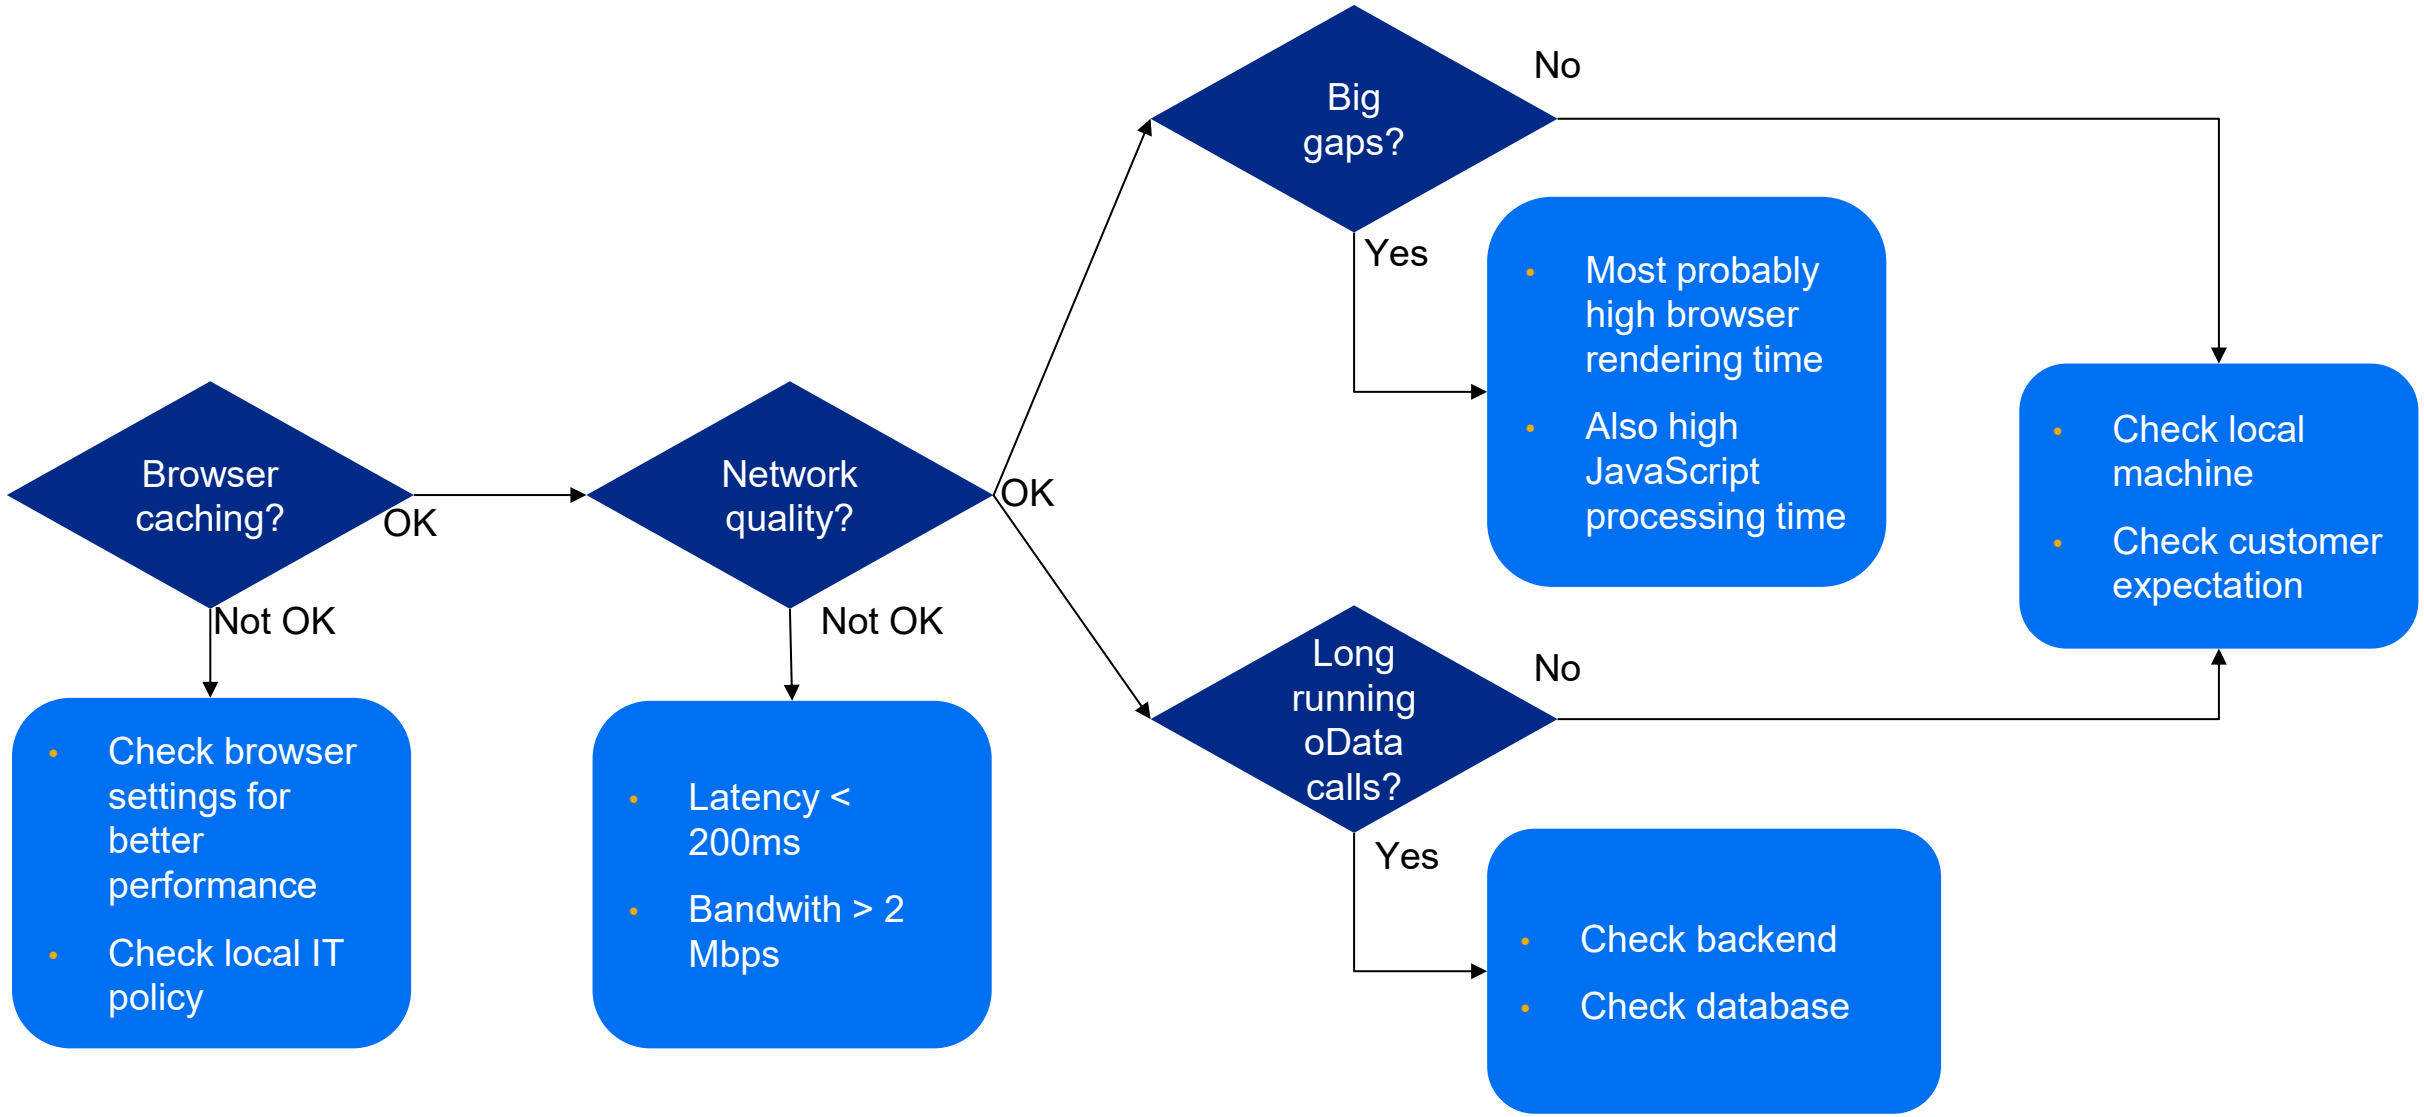

Front-end application performance

How browsers work

First-level break-down to frontend, network and backend performance issues

Fully optimized application – Round-Trips

Check if round-trips could be avoided or optimized

- Can it be removed completely (i.e. not used libraries, out-dated library, 3rd-party library duplicating browser functionality)?
- Can it be merged/aggregated to other requests (`$batch`, `$expand`, sprites, aggregated libraries …)?
- Can it be cached in the browser cache?
- Can it be cached for longer time?
- Can it be served through Content Delivery Network (CDN)?
- Can it be loaded in later point of time (on demand)?

The **fastest** round-trip is the one that doesn't happen!

Fully optimized application – Round-Trips (cont)

- Reduce resource fragmentation (JavaScript, CSS) by merging:
  - /resources/js/myCodeList.js
  - /resources/js/myCodeDetail.js
  - /resources/js/myCodeUtils1.js
  - /resources/js/myCodeUtils2.js

  } /resources/js/myLib.js
- Avoid loading of resource duplicates
  - /resources/js/myCode.js
  - /some/other.css
  - /resources/js/myCode.js
  - /resources/js/myCode.js

  } Bad Modularization?
- Use aggregation of small images/icons
  - Icon fonts
  - CSS sprites
  - Image sprites (including SVG sprites)

- Use UI5 Builder:
  - Library bundling
  - Component-preload generation
  - Minify sources

Exercises overview

- Getting started

  Clone our repository and start the server locally

- Exercise 1

  Introduction to the tools and network traffic

- Exercise 2

  Introduction to UI5 Builder

- Exercise 3

  Deep dive into network traffic

- Exercise 4

  Deep dive into OData requests

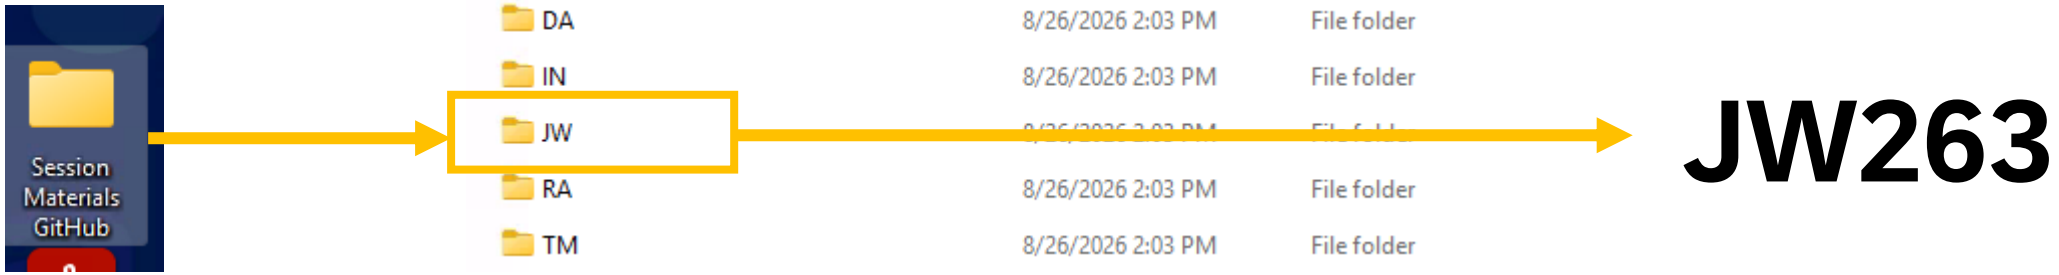

- (Bonus) Exercise 5

  Deep dive into additional settings

Let‘s get started
